Assignment

→ Counter Application using redux.

- Redux is a predictable state container for javascript apps. Redux toolkit is the official opinionated toolset for efficient redux development.

- CounterSlice.JS

```
import { createSlice } from "@reduxjs/toolkit";

const counterSlice = createSlice({
        name = "counter"
        initialState : { value: 0},
        reducers : {
            increment: (state) => { state.value += 1 ; },
            decrement: (state) => { state.value -= 1 ; },
        },
    });
export const { increment, decrement } = counterSlice.actions;
export default counterSlice.reducer;
```

- Counter.jsx (component for counter UI)

→ Workflow

i) Step 1: Applications load

- The applications loads with the counter value set to 0
- Counter state is initialized through redux store.

No.
Date: . .

ii) Step 2: User Interaction

- It includes 2 buttons:

- Increase: Allows the counter to increment by 1.
- Decrease: Allows the counter to decrement by 1.

→ Features

- Modern responsive user interface.
- Card based layout.
- Real time counter updates.
- Redux toolkit integrations.
- React functional components.
- Tailwind CSS styling.
- Hover effect on buttons.
- Clean component structure.

→ Technical Stack

- React
- Redux toolkit
- Tailwind CSS
- Javascript.

→ Src folder structure

Src / index.jsx
Counter.jsx
counterSlice.js
store.js
App.jsx
